Cybersecurity Incident Report: Network Traffic Analysis

Part 1: Provide a summary of the problem found in the DNS and ICMP traffic log.
The UDP protocol reveals that: the website www.yummyrecipesforme.com is unreachable This is based on the results of the network analysis, which show that the ICMP echo reply returned the error message: udp port 53 unreachable length 254 The port noted in the error message is used for: port 53 The most likely issue is: DoS attack

Part 2: Explain your analysis of the data and provide at least one cause of the incident.
Time incident occurred: 1:24 pm Explain how the IT team became aware of the incident: several customers of clients reported that they were unable to access the client company website. Explain the actions taken by the IT department to investigate the incident: analyse the situation using tcpdump and determine which network protocol was effected during the incident and i started by attempting to visit the website and also received the error message. Note key findings of the IT department's investigation (i.e., details related to the port affected, DNS server, etc.): the affected port is port 53 with DNS server IP address 203.0.113.2. The query identification number appears as 35084+ A? And the ICMP error message port 53 unreachable. Note a likely cause of the incident: a DoS attack where an attacker might have launched an attack to crash the website.
