Security organization worksheet

Part 1: Describe your security interests
• I am interested in starting my career as a SOC analyst, focused on monitoring threats and protecting sensitive data, with a long-term goal of specializing in cloud security.
Part 2: Identify three organizations and include their mission or objectives
• **Organization 1: EG-CERT (Egyptian Computer Emergency Readiness Team)** EG-CERT provides national cybersecurity incident response, threat analysis, and defense against cyberattacks. It offers early warnings on malware and collaborates with critical infrastructure sectors across Egypt. • **Organization 2: OWASP Cairo Chapter** OWASP Cairo Chapter is a local non-profit community dedicated to improving software and application security. It hosts free technical workshops, webinars, and capture-the-flag events on cloud and application security. • **Organization 3: ISACA Cairo Chapter** ISACA Cairo Chapter focuses on IT governance, risk management, and data privacy. It offers certifications and networking events to help professionals build secure frameworks and protect sensitive data.
Part 3: Write out which organization aligns with your interests and why
• **Organization 1: EG-CERT:** Directly aligns with my core goal of working as a SOC analyst by providing real-world insights into incident response and threat monitoring in Egypt. • **Organization 2: OWASP Cairo Chapter:** Relates well to my interest in cloud security through hands-on technical sessions, though its primary focus is on application development.

- **Organization 3: ISACA Cairo Chapter:** Helps with my objective of protecting sensitive data through compliance and security governance standards, but is less focused on hands-on SOC operations.

- **Best choice for my professional interests:** EG-CERT is the best fit because its primary mission centers on incident response, threat detection, and national defense, which directly mirrors the daily responsibilities and goals of a blue team SOC analyst.
